Lead MLOps Engineer JOB-35821

Posted | Tue, 20 Aug 2024 **Active**  0 / 1

Description

The weather impacts everything around us and drives decisions that range from government policy on climate change to whether it's a good day for the family to go to the beach. The Weather Company focuses on connecting people, businesses and governments with the world's best weather forecasts. It is the parent company for The Weather Channel and other radio and television broadcast channels, as well as digital properties such as weather.com. The company creates apps for broadband and mobile platforms, including iOS and Android mobile devices.

The Weather Company is looking for a talented and passionate ML Engineer to join our AI team. Our mission is to build predictive solutions that focus on the business needs. These include solutions like The Weather Channel app for recommendations based on user activity.

You will be working closely with each team member to understand the team's overall strategy and direction and provide your ML expertise in collaborating to design, build, deploy, and operate production pipelines and systems.

Important: this role requires in-person work once a quarter for a few days (approximately a week). Exact dates and location to be confirmed.

The ideal candidate will be:

- Problem solver: you excel at understanding and solving complex problems in a proactive way.
- Quality communicator: you can break down complex or difficult topics and present these verbally, and in writing
- Ownership: you love being responsible for owning and improving AI solutions
- Sharing: you're excited by the opportunity to establish best practices for the team through leading by example and promoting culture change
- Curiosity: you are innately curious, and have a passion for learning new things
- Passionate: you have a passion for all things AI and ML and want to share that with the team

Responsibilities

- Contribute to the MLOps culture and practices enabling the team to create solutions with less friction and solid security, and reliability.
- Add expertise on ML Pipelines (Model serving, Model performance monitoring)
- Contribute to design, refinements, optimizations, and scalability for systems operating machine learning pipelines at web scales
- Build and lead building automated deployments and operations of AI based solutions
- Work directly with team to enable successful deployments and maintainable production systems.

Additional Responsibilities

- Provide monthly training sessions to the team on current trends in the field and help the team members ramp up their technical skills
- Communicate effectively with cross-functional teams and stakeholders, including other leader
- Be proactive and vocal in order to raise blockers and challenges that affects the development of the team and solve them
- Propose new ideas and innovative solutions
- Identify and fix gaps in the existing codebase and technologies used

Qualifications

- Bachelor's degree in a STEM field such as Statistics, Math, Engineering, Information Systems, etc.
- Experience with MLOps lifecycle management
- Docker and containerization.
- Python production level coding, including best practices
- Cloud platforms (e.g., AWS, GCP, and/or Azure) with particular experience with ML & Data offerings operating and deploying solutions using AWS Service including, but not limited to, S3, EKS, EMR, Athena, Glue, Lambda, Kinesis, MSK, Sagemaker, SQS and SNS (or correlated offerings on other cloud platforms).
- CI/CD tools (e.g., Jenkins, TravisCI, Bamboo).
- Good communication and presentation skills to explain technical solutions to either technical peers or non-technical stakeholders.
- Willingness to collaborate with colleagues to achieve repeatable high quality outcomes as a team.

Preferred Qualifications

- Master's degree in a STEM field such as Statistics, Math, Engineering, Information Systems, etc.
- Kubernetes and container orchestration platforms.
- Infrastructure-as-code (e.g., Terraform, Ansible, Chef).
- Apache spark
- Airflow
- Certification in cloud platforms such as AWS, GCP, and/or Azure.
- Understanding of test-driven development. Willingness to improve test coverage of existing codebase.

Overlap Hours

- 5+ hours with EST (9 am - 2 pm)

Contract Length

- 12 months, renewable
- Full-time contractor role (8 hours/day)

Device

- Laptop to be provided by Andela (either shipped or stipend to purchase, in this case a receipt must be provided)

Requirements & Notes

All-in rate \$7,500 Assessment Path: ML Location: India Important: talent need to travel in India on a quarterly basis to work in person for a short period of time Time zone overlap: 5+ hours with EST (9 am - 2 pm) Must have: Leadership experience, Python (production level coding and best practices),

SQL, full MLOps lifecycle, Docker, CI/CD, AWS (Sagemaker, S3, etc) or equivalent Nice to have: Terraform, Kubernetes, Spark, Airflow, Cloud certifications

Location Requirements

British Indian Ocean
Territory, India

Time

Not Available

Talent Rate

\$7500.0

Must have skills

- AWS (Amazon Web Services)
- Data Science
- Docker
- Machine Learning
- Python
- SQL

Nice to have skills

- Apache Airflow
- Apache Spark
- Kubernetes
- Terraform
